Manufacturer	Cultural Farm BioDar

Product description

Nesting box

The "hive" box with nesting trays constitute the body of the **BioDar System**. The box is built of **wood**, which is a durable, aesthetic and very well accepted by the bees material. Moreover, it has good acoustic and thermal insulation properties, positively influencing the course of biological processes in the nest arrangement. Maximum weight of the box with the nesting trays entirely filled up with food for larvae and with bees is not greater than 6.5 kg. The nesting boxes are secured with eco-friendly varnish, protecting them against climatic and habitat adverse conditions (great humidity, microbiological disintegration).

The nesting box has a front cover that is installed after bee flights have ended to protect the nests from rodents and birds.

Material:

Wood.

External dimensions of the nesting box:

- height 42 cm,
- width 30 cm,
- depth 20 cm.

Internal dimensions of the nesting box:

- height 29 cm,
- width 26 cm,
- depth 18 cm

The internal dimensions are adapted to the dimensions of 1 set (35 pcs) of BioDar nesting trays for running mason bee breeding.

Finishing:

The nesting boxes are covered with an ecological varnish protecting them from adverse climatic and habitat conditions (high humidity, microbiological decomposition).

Colors:

pine (clear varnish) or dark brown.

The colors on the picture may differ from the actual colors of the product.

This product has additional options:

Color: Clear , Dark brown

BioDar Sytem for breeding mason bees (*osmia rufa* / *bicornis*)

Mason Bee - biology and use in agriculture, BioDar:

Extracting of mason bee cocoons from BioDar nesting trays:

Producer

Cultural Farm BioDar implements its mission using the rich scientific achievements of the Institute of the Heritage of Villages and Regions and extensive cooperation with non-governmental organizations.

The protection of natural and cultural heritage is an important sphere of the Farm's activities, and one of the basic goals is to preserve biodiversity and breeding useful organisms that can be used in agriculture and horticulture.

Since 1989, we have been implementing a program for implementing of bumblebees and solitary bees for horticulture practice and since 2012 the company has been running its own breeding of solitary bees on a commercial scale. By participating in the creation of biological progress, we respond to the high demands placed on by food consumers and our customers in the field of high quality of offered products and the safety of their use.

The farm is part of the regional biodiversity conservation center. In this area of engagement, it runs conservation collections of crops with high biological value (historical varieties of agricultural, vegetable and fruit plants). In cooperating organic farms, it also oversees collections of medicinal, herbal and melliferous plants. Similar works are carried out for the protection of rare and endangered plants.

The sphere of cultural heritage includes products decorated in a way characteristic for different cultural groups. The high quality of our products is appreciated by very demanding customers. Their valuable remarks make the farm's offer constantly replenished and the products are perfected.
